

Ashitosh Shashikant Bendre *Game Developer/Programmer*

ashitoshbendre.work@gmail.com • ashitoshbendreportfolio.vercel.app • 8208542466 • Pune, Maharashtra

PROFILE

Unity Game Developer with experience designing and implementing gameplay systems, multiplayer features, and real-time simulations using **Unity** and **C#**. Skilled in building scalable game architectures, prototyping new features, and optimizing gameplay performance. Experienced in multiplayer networking, physics-based interactions, and AR applications. Passionate about writing clean, maintainable code and building engaging player experiences for mobile and interactive platforms.

PROJECTS

Bounce Platformer with In-Game Level Editor

Prototype platformer featuring runtime level creation tools

- Built an in-game level editor enabling runtime level creation.
- Designed a metadata-driven level system for automatic level data generation.
- Implemented dynamic level loading using level metadata architecture.
- Structured modular codebase to support scalable level creation pipelines.

Technologies: Unity, C#, ScriptableObjects

Werewolf Project (Multiplayer Social Game)

Real-time multiplayer social deduction game with chat and voice communication.

- Implemented multiplayer architecture using **Photon Fusion**.
- Integrated real-time voice communication using **Photon Voice**.
- Developed gameplay features including emoji interactions, player abilities, and game manager systems.
- Debugged network synchronization issues and improved gameplay stability.

Technologies: Unity, C#, Photon Fusion, Photon Voice

ICSI Simulator (Medical Simulation - Unity 3D)

High-fidelity IVF training simulation with soft-body physics interactions.

- Implemented soft-body egg simulation using Obi Physics.
- Built precision tool interaction systems for simulation procedures.
- Developed dynamic post-processing effect management system.
- Optimized physics performance by enabling/disabling simulations based on camera zoom levels.

Technologies: Unity, C#, Obi Physics

PROFESSIONAL EXPERIENCE

PlatypusBox

03/2024 – present

Unity Game Developer

- Designed and implemented gameplay systems and interactive mechanics using **Unity** and **C#**.
- Built multiplayer gameplay prototypes using **Photon PUN** and **Photon Fusion**.
- Developed modular game architecture using ScriptableObjects and object-oriented design principles.
- Integrated backend services such as Firebase and REST APIs for Unity-based applications.
- Developed AR features using **AR Foundation** and **Vuforia**.
- Collaborated with designers and artists to prototype gameplay features and improve player experience.

SKILLS

— **Programming** C#, Object-Oriented Programming (OOP) • **Game Development** Unity (2D & 3D), Gameplay Systems, UI Implementation, Physics-Based Interactions • **Multiplayer** Photon Fusion, Photon PUN, Mirror Networking • **AR Development** AR Foundation, Vuforia • **Tools** Git, Unity Editor, Figma, Adobe Photoshop
